Admin Credentials:

Email: admin@example.com

Password: adminadmin

User Stories Implemented:

- 1) Feature: Reset Password to UIN
As a student
So that I have an alternative way to login when I forget my password.
I want to reset my password when I forget it.
- 2) Feature: After deleting a user without team, redirected to the list of users without a team
As an Admin
So that I can view other users without a team after deleting one
I want to be redirected to the list of users without a team after deletion
- 3) Feature: After editing a team, redirect back to the list of all teams
As an Admin
So that I can view all teams after completing edits on one
I want to be redirected to the list of teams after making edits to a team

Other problems addressed:

- 1) Login with the NETID option removed as it was no longer feasible.
- 2) Download XLSX of users now results in the details of all users being downloaded and not just the current page.
- 3) Fixes for a number of outdated and failing tests.

Design Diagram for this Iteration:

Not required as changes did not require significant design.

Additional Documentation related to change in User Stories:

The password reset feature is being implemented in stages of increasing complexity: At present, it is being reset to the student's UIN to offer at least some working methodology to reset the password. In the upcoming iterations, a password reset via email feature will be implemented.

(For Legacy Project) Any User Stories that were rewritten and code refactored:

Some of the test helpers assume that a user's name is a single field while the backend instead treats these as First Name and Last Name - 2 separate fields. This caused most tests to fail, but this was fixed in Iteration 1.

Evaluation of code and test (SimpleCov and CodeClimate):

All newly implemented features have tests written for them. Some old and outdated tests were fixed, but there are tens of broken tests in the legacy code that are not succeeding. We are fixing legacy tests whenever we can, but this is not a priority.

If you were not able to implement all the stories that you initially chose for this iteration, please list which ones and why not:

User stories with utmost priority were implemented in this iteration.

If you have changed any of your stories, please write a short description of the changes made and the reason behind the changes:

User stories remain unchanged.
